Axiom Johne's Disease & Neospora Monitoring Programmes
SUBMISSION FORM

Name of Submitting Vet	**OWNER:** _____ **FARM:** _____	**HERD TYPE:** ☐ BEEF ☐ DAIRY NO. OF COWS
Please add your practice **NAME, ADDRESS** AND **PRACTICE CODE** here... **PRACTICE POSTCODE:**	**FARMERS EMAIL:** _____ *(We will send a test reminder by email after 11 months)* **EMAILED COPY OF LAB REPORT REQUIRED FOR FARMER?:** ☐ **YES** ☐ **NO** **DATE SAMPLED:** _____	

I wish to participate in: **Johne's disease monitoring** ☐ **Neospora monitoring** ☐

- For **Johne's disease** we recommend that **all cattle over two years old** are tested annually.
- For **Neospora** we recommend that **all breeding females over 12 months old** are tested annually.

A good timing for both Johne's and Neospora blood testing is 1-3 months before the start of calving.

Single batch testing e.g. Annual Herd Screen (please tick as applicable)

Johne's:	40-99 (FJOH40) ☐	100-199 (FJOH100) ☐	>200 (FJOH200) ☐
Neospora:	40-99 (FNEO40) ☐	100-199 (FNEO100) ☐	>200 (FNEO200) ☐

Regular Sampling e.g. in all-year-round calving herds

If you are doing batch testing throughout the year e.g. at drying off then **please indicate how many blood samples you will be submitting in a 12 month period:**

Johne's disease: Greater than 100 but less than 200 samples (FJD100) ☐ Greater than 200 samples (FJD200) ☐

Neospora: Greater than 100 samples (FNEOD100) ☐

If you are testing fewer than 100 samples for Johne's disease and/or Neospora over a 12 month period our standard diagnostic test rates will apply.

I understand that if I submit fewer samples than I have indicated above the difference in the test rates will be charged.
